## Class Test 2

16 April 2010

1. (5 marks) Find the complex exponential Fourier series representation of the periodic signal below:

### Information

- The test is closed-book.
  - This test has *four* questions, totalling 20 marks.
  - Answer *all* the questions.
  - You have 45 minutes.
-

2. (5 marks) Use transform properties to find the Fourier transform of

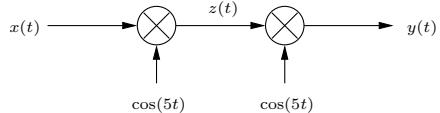

$$x(t) = e^{j5t} e^{-2(t-2)} u(t-2).$$

3. (5 marks) Consider a signal with the following frequency domain representation:

$$X(\omega) = 2\pi[\delta(\omega - 5) + \delta(\omega + 5)].$$

- (a) Use the Fourier synthesis integral directly to show that  $x(t) = 2 \cos(5t)$ .
- (b) Plot  $x(t)$  and  $X(\omega)$ .

4. (5 marks) Consider the system shown below:

If the Fourier transform of  $x(t)$  is  $X(\omega) = p_1(\omega)$ , then sketch the Fourier transform of  $Y(\omega)$ .
