Information

- The test is closed-book.
 - This test has *four* questions, totalling 20 marks.
 - Answer *all* the questions.
 - You have 45 minutes.
-

1. (5 marks) The *step* response of a linear time-invariant system is given by

$$g(t) = [2 + 3e^{-4(t+1)}]u(t + 1).$$

- (a) Plot $g(t)$.
- (b) Find the impulse response of the system.
- (c) Is the system causal or non-causal? Why?

Note: the step response of a system is the output when the input is $u(t)$.

2. (5 marks) Given $x(t)$ and $h(t)$ shown below, find the convolution $y(t) = x(t) * h(t)$ for all values of t .

3. (5 marks) Let $x(t)$ be a real periodic function, with fundamental frequency $\omega_0 = 4$ and with Fourier series in exponential form:

$$x(t) = \sum_{k=-\infty}^{\infty} \frac{j^k |k|}{1+k^2} e^{jk4t}$$

- (a) Plot the magnitude and phase of the Fourier series coefficients over the range $k = -4$ to $k = 4$.
- (b) Determine the Fourier series of the signal in trigonometric form.
- (c) How much power is contained in the second harmonic?

4. (5 marks) An LTI system has impulse response $h(t) = e^{-t}u(t)$.

(a) Use tables to find the Fourier transform $H(\omega)$ of $h(t)$.

(b) Use convolution to find the output $y(t)$ when the input is $x(t) = e^{j5t}$. Show that this can be written as $y(t) = H(5)e^{j5t}$.

(c) Suppose the input to the system is the signal

$$x(t) = \sum_{k=-\infty}^{\infty} c_k e^{jk5t}.$$

Write down an expression for the output $y(t)$.
