Information

- The exam is closed-book.
 - There are 8 questions totaling 75 marks. You must answer all of them.
 - The last page of this exam paper contains an information sheet with standard Fourier transforms, transform properties, and some trigonometric identities.
 - You have 2 hours.
-

1. Consider $x(t)$ below

Sketch the following:

- (a) $x_1(t) = 2x(-t)$
- (b) $x_2(t) = x(-t + 2)$

(10 marks)

2. Consider a continuous-time system which has input signal $x(t)$ and output $y(t) = x(t)u(t)$, where $u(t)$ is the unit step.

- (a) Find the output when the input is $x_1(t) = \delta(t - 1)$.
- (b) Find the output when the input is $x_2(t) = \delta(t + 1)$.
- (c) Is this system time invariant? Justify your answer.
- (d) Is this system homogeneous? Justify your answer.

(10 marks)

3. An LTI system has an impulse response $h(t) = u(t + 1) - u(t - 1)$. Sketch $h(t)$, and determine and sketch the response of the system to the input below:

(10 marks)

4. Consider the periodic signal $x(t)$ shown below:

Specify the fundamental frequency ω_0 , and in the series expansion

$$x(t) = \sum_{k=-\infty}^{\infty} c_k e^{jk\omega_0 t}$$

find the Fourier series coefficients c_k for

- (a) $k = 0$
- (b) $k = 3$
- (c) $k = -3$.

You may wish to make use of the fact that the signal $z(t)$ below

has a Fourier series expansion of the form

$$z(t) = \sum_{k=-\infty}^{\infty} d_k e^{jk\frac{\pi}{3}t}$$

with

$$d_k = \begin{cases} \frac{1}{3} & k = 0 \\ \frac{1}{k\pi} \sin\left(\frac{k\pi}{3}\right) & \text{otherwise.} \end{cases}$$

(10 marks)

5. (a) Find the Fourier transform of the signal

$$x(t) = e^{2t}u(-t).$$

(b) A signal $x(t)$ can be expressed in the frequency domain as

$$X(\omega) = j \frac{d}{d\omega} \left\{ \frac{e^{j2\omega}}{1 + j\omega/3} \right\}.$$

Use the properties of the continuous-time Fourier transform to find the time domain signal $x(t)$.

(10 marks)

6. The input and output of a stable and causal LTI system are related by the differential equation

$$\frac{d^2 y(t)}{dt^2} + 4 \frac{dy(t)}{dt} + 3y(t) = 2x(t).$$

(a) Show that the frequency response of the system can be written as

$$H(\omega) = \frac{Y(\omega)}{X(\omega)} = \frac{2}{(j\omega + 3)(j\omega + 1)}.$$

(b) What is the Fourier transform of the output if the input is $x(t) = e^{-3t}u(t)$?

(c) Find the impulse response of the system.

(10 marks)

7. The impulse response of an LTI system is given by

$$h(t) = \frac{1}{4}\delta(t + 1) + \delta(t) + \frac{1}{4}\delta(t - 1).$$

(a) Is the system causal? Why?

(b) Find and sketch the magnitude $|H(\omega)|$ and phase $\angle H(\omega)$ of the frequency response of the LTI system over the frequency interval $-2\pi \leq \omega \leq 2\pi$.

(c) Suppose the given system is connected via a cascade (series) structure to another system with impulse response $g(t) = p_1(t)$. Determine the overall impulse response of the interconnection of LTI systems.

(10 marks)

8. Consider the signal

$$x(t) = \text{sinc}^2(t/2\pi).$$

- (a) Find and plot $X(\omega)$.
 (b) According to Nyquist, what is the largest sampling interval T for which the signal can be reconstructed from samples?
 (c) Sketch the spectrum of $x_s(t) = x(t)p(t)$, where

$$p(t) = \sum_{k=-\infty}^{\infty} \delta(t - kT_s)$$

and $T_s = \frac{2}{3}\pi$.
