## EEE4114F: Digital Signal Processing

Class Test 2
11 April 2019

1. ( 15 marks) Consider the right-sided signal $x[n]$ described by the following z-transform:

$$
X(z)=\frac{-4+10 z^{-1}-5 z^{-2}}{1-2 z^{-1}+z^{-2}}
$$

Determine a real closed-form expression for $x[n]$ and sketch it for $n=-3, \ldots, 3$.

Name:
Student number:

## Information

- The test is closed-book.
- This test has four questions, totalling 60 marks.
- Answer all the questions.
- You have 60 minutes.

2. (15 marks) Suppose the 8 -point DFT of $\{x[0], x[1], x[2], x[3], 0,0,0,0\}$ is given by the elements of the vector below:

$$
\mathbf{X}_{8}=\left(\begin{array}{c}
2 \\
(1 / 2-\sqrt{3 / 2})-j 3 / 2 \\
-1+j \sqrt{3} \\
(1 / 2+\sqrt{3 / 2})+j 3 / 2 \\
2 \\
(1 / 2+\sqrt{3 / 2})-j 3 / 2 \\
-1-j \sqrt{3} \\
(1 / 2-\sqrt{3 / 2})+j 3 / 2
\end{array}\right)
$$

(a) What is the 4-point DFT of $\{x[0], x[1], x[2], x[3]\}$ ?
(b) Find the value of $x[0]$.
3. ( 15 marks) We have collected $n$ data points (all positive) from a data source that follows an exponential distribution. These collected data are known to be IID (independent and identically distributed).

For exponential distribution, the pdf for observation $x$ (given $x \geq 0$ ) is given by
$p(x)=\lambda \exp (-\lambda x)$. Find the maximum likelihood estimate (MLE) for the parameter $\lambda$. (Hint: remember how we found the ML estiimate of the mean for a Gaussian distribution.) Suggested procedure: find the likelihood probability of the parameter $\lambda$ given the $n$ observations ( 5 marks); then find the log-likelihood (4 marks); next find the value of the parameter which will maximise the log-likelihood ( 6 marks).
4. (15 marks) Imagine that machines have gone really intelligent and somehow destroyed all humans. Then a machine discovers two thermometers, one measuring temperature in
Celsius and one in Fahrenheit. The machine is confused as it does not know the relation that links these two measurements, so it gathers a set of 7 measurements:

$$
-40,-10,0,8,15,22,38
$$

in Celsius corresponding to

$$
-40,14,32,46,59,72,100
$$

in Fahrenheit. It builds an ANN model to convert Celsius value to Fahrenheit using the following:
$10=$ tf.keras.layers.Dense(units=50, activation='relu', input_shape=[1])
11 = tf.keras.layers.Dense (units=1)
model $=$ tf.keras.Sequential([10, 11])
When tested with new measurements this model does not perform well, giving an error of around 2-3 degrees! Can you explain why?

Suggested procedure: first draw a rough plot of the data available (4 marks); comment on the complexity of the task ( 2 marks); now look at the code and explain what each layer means ( 4 marks); then comment on what might be going wrong ( 5 marks).

## Discrete-time Fourier transform properties

| Sequences $x[n], y[n]$ | Transorms $X\left(e^{j \omega}\right), Y\left(e^{j \omega}\right)$ | Property |
| :---: | :---: | :---: |
| $a x[n]+b y[n]$ | $a X\left(e^{j \omega}\right)+b Y\left(e^{j \omega}\right)$ | Linarity |
| $x\left[n-n_{d}\right]$ | $e^{-j \omega n_{d X}\left(e^{j \omega}\right)}$ | Time shift |
| $e^{j \omega_{0} n_{x[n]}}$ | $x\left(e^{j\left(\omega-\omega_{0}\right)}\right)$ | Frequency shift |
| ${ }^{x[-n]}$ | $x\left(e^{-j \omega}\right)$ | Time everesal |
| $n \times[n]$ | ${ }_{j} \frac{d X\left(e^{j}{ }^{j \omega}\right)}{d Y}$ | Frequency diff. |
| $x[n] * y[n]$ | $\left.X\left(e^{j \omega}\right)^{d \omega}{ }^{\text {( }}{ }^{j \omega}\right)$ | Convolution |
| $x[n] y[n]$ | $\frac{1}{2 \pi} \int_{-\pi}^{\pi} X\left(e^{j \theta}\right) Y\left(e^{j(\omega-\theta)}\right) d \theta$ | Modul |

Common discrete-time Fourier transform pairs

| Sequence | Fourier trasform |
| :---: | :---: |
| $\delta[n]$ | 1 |
| $\delta\left[n-n_{0}\right]$ | $e^{-j \omega n_{0}}$ |
| $(-\infty<n<\infty)$ | $\sum_{k=-\infty}^{\infty} 2 \pi \delta(\omega+2 \pi k)$ |
| $a^{n} u[n] \quad(\|a\|<1)$ | -ju |
| $u[n]$ | $\sum_{k=-\infty}^{\infty} \pi \delta(\omega+$ |
| $(n+1) a^{n} u[n](\|a\|<1)$ | $\frac{1}{\left(1-a e^{-j \omega}\right)^{2}}$ |
| $\frac{\sin \left(\omega_{c} n\right)}{\pi n}$ | $x\left(e^{j \omega}\right)= \begin{cases}1 & \|\omega\|<\omega_{c} \\ 0\end{cases}$ |
| $x[n]= \begin{cases}1 & 0 \leq n \leq M \\ 0 & \text { ohervise }\end{cases}$ | $\begin{gathered} 0 \quad \omega_{c}<\|\omega\| \leq \\ \frac{\sin [\omega(M+1) / 2]}{\sin (\omega / 2)} e^{-j \omega M / 2} \end{gathered}$ |
| $e^{j \omega_{0} n}$ | $\sum_{k=-\infty}^{\infty} 2 \pi \delta\left(\omega-\omega_{0}+2 \pi k\right)$ |

## Z-transform properties

| Sequences $x[n], y[n]$ | Tranforms $X(z), Y(z)$ | Roc | Property |
| :---: | :---: | :---: | :---: |
| $a x[n]+b y[n]$ | $a X(z)+b Y(z)$ | ROC conlains $R_{x} \cap R_{y}$ | Linearity |
| $x\left[n-n_{d}\right]$ | $z^{-n_{d X}(z)}$ | ROC $=R_{x}$ | Time shift |
| $z_{0}^{n} x[n]$ | $X\left(z / z_{0}\right)$ | ROC $=\left\|z_{0}\right\| R_{x}$ | Frequency sale |
| $x^{*}[-n]$ | $\chi^{*}\left(1 / z^{*}\right)$ | $\mathrm{ROC}=\frac{1}{R_{x}}$ | Time reversal |
| $n x[n]$ | $-z \frac{d X(z)}{d z}$ | $\mathrm{ROC}=R_{x}$ | Frequency diff. |
| $x[n] * y[n]$ | $X(z) Y(z)$ | ROC contains $R_{x} \cap R_{y}$ | Convolution |
| $x^{*}[n]$ | $x^{*}\left(z^{*}\right)$ | ROC $=R_{x}$ | Conjugation |

Common z-transform pairs

| Sequence | Transform | Roc |
| :---: | :---: | :---: |
| $\delta[n]$ | 1 | All |
| $u[n]$ | $\frac{1}{1-z^{-1}}$ | $\|z\|>1$ |
| $-u[-n-1]$ | $\frac{1}{1-z-1}$ | $\|z\|<1$ |
| $\delta[n-m]$ | $z^{-m}$ | All $z$ except 0 or $\infty$ |
| $a^{n} u[n]$ | 1 | $\|z\|>\|a\|$ |
| $-a^{n} u[-n-1]$ |  | \|z| < $\|a\|$ |
| $n a^{n} u[n]$ | $\frac{\frac{a z-1}{}}{(1-a z-1)^{2}}$ | $\|z\|>\|a\|$ |
| $-n a^{n} u[-n-1]$ | $\frac{\frac{(1-a z-1)^{2}}{(a z-1}}{\left(1-z^{\prime}-1\right.}$ | $\|z\|<\|a\|$ |
| ${ }^{n} \quad 0 \leq n \leq N-1$, | $\frac{1-a^{N} z^{\prime}-N}{}$ |  |
| ooterwise | $\frac{1-a \alpha z}{1-a z-1}$ | $\|z\|>0$ |
| [n] | $1-\cos \left(\omega_{0}\right) z^{-1}$ | \| $>$ |
|  | ${ }^{2} \cos \left(\omega_{0}\right) z^{-1}+z^{-1}$ |  |
| $r^{n} \cos \left(\omega_{0} n\right) u[n]$ | $\frac{1-2 r \cos \left(\omega_{0}\right) z^{-1}+r^{2} z^{-2}}{1-2}$ | $\|z\|>\|r\|$ |
